

## Alpha Sheet Metal Laser

Phoenix Precision has just installed a new Sheet Metal Laser Cutting Machine.

- The machine has a double cut capability, 300mm Z-axis and scratch free material processing.
- It can process up to 8mm thick material including stainless steel, aluminium and mild steel.
- It has the capability to take up to 5000 x 1500 sheet size.

Thanks to this latest technology we can now offer a process that is even more cost effective and is ideal for industries with critical lead times that require fast turn around – while still delivering the high quality for which Phoenix Precision is renowned.

Housed in our existing 26,000 sq ft facility this plant now lets us offer an even more comprehensive service to all of our customers.

The new 4KW machine complements our existing turret presses, offering an even more comprehensive range of products and services.

Phoenix is constantly striving to provide an improving service for our clients and the installation of this new machine is just one more indication of that commitment.

Why not arrange to come and see our new equipment and let us demonstrate just how effective it really is.
